

## Features and Benefits

**Supports 4,320 LC or 2,880 SC ports per frame**  
Saves space through increased port density

**Available in rear cable access**

Designed in compliance with GR-449-CORE, Issue 3 standards

**Modular cassette design**

Enables one platform for many application spaces e.g. central office, headend, FTTx, FTTCS and data center

**Increased jumper routing space**

Supports standard 1.6 and 2.0 mm jumpers (2.0 in a 36 F cassette only)

**Available in front cable access**

Allows for back-to-back frame configuration

The Centrix™ System is a high-density fiber management system that provides a balance of industry-leading density with innovative jumper routing. The system can be deployed in multiple applications including: central office, headend, FTTx, FTTCS and data center.

Centrix System supports up to 4,320 LC or 2,880 SC connector ports per standard 7-ft frame/2134 mm. The frame design provides optimized routing paths for jumpers, reducing the risk of pileup or entanglement. A single jumper length for an in-frame, cross-connect network design reduces jumper inventory.

At the foundation of the Centrix System is a single, modular cassette that can be tailored to include a variety of optical devices (splitter, WDM, etc). The modular cassette provides flexibility and functionality within a single frame without sacrificing density. Each cassette contains up to either 24 SC or 36 LC connector adapters. Easy port access is possible due to a sliding cassette with drop-down handle. A 1RU housing will hold 3 cassettes, a 2RU housing will hold 6 cassettes and a 4RU will hold 12 cassettes. Housings can be ordered empty, loaded with cassettes for on-frame splicing or as stubbed assemblies to reduce installation time and risk.

The Centrix System is available with both rear or front cable access. Front cable access allows back-to-back frame configurations or mounting against a wall. Both frame configurations save space through increased port density.
